Construction

UBC Type II

Facility Use

Temporary detention facility

Description

Minimum security detention facility built in 4 complete phases. Metal siding and concrete & epoxy floors, electric monitored doors and security system.

Completion

120 days

Modular
Construction

Faced with a court order to relieve prison overcrowding, Bernalillo County officials needed a speedy resolution or faced the specter of jail time themselves. They turned to Ramtech for the design and construction of a facility consisting of four housing units, controlled entrance with sally-port, and centralized control center. The building features epoxy coated concrete flooring, smoke evacuation and detention grade hardware throughout.
