Oilton, OK

## Project Size

15,232 sq ft

## Construction

UBC Type V

## Contract Type

Design-Build

Purchased through

BuyBoard

## Facility Use

Classroom Wing

## Description

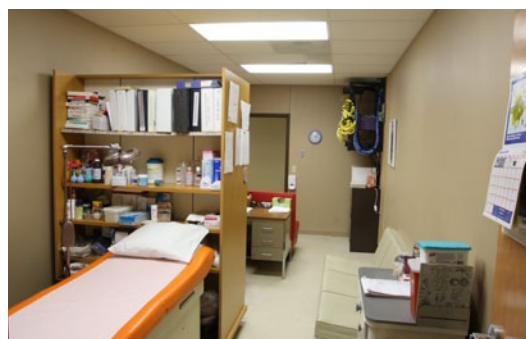

Permanent modular

Grade level entries

## Completion

120 days

Accelerated  
Building System

Located west of Tulsa, the Oilton Public Schools were faced with having to replace a portion of their aging elementary school. The school district needed a cost effective way of demolishing the existing structure and building up the site to accommodate a larger building, all while minimizing the amount of onsite construction activity and overall cost. The district devised a plan to have the local county do the demolition of the existing structure.

Working with Ramtech, the district purchased the building through the Buyboard purchasing cooperative. The result is a new 15,232 square foot facility with 13 classrooms, library, computer lab, nurse's office, and faculty lounge.
