Mansfield, TX

## Project Size

1,960 sq ft

## Facility Use

Office Space

## Description

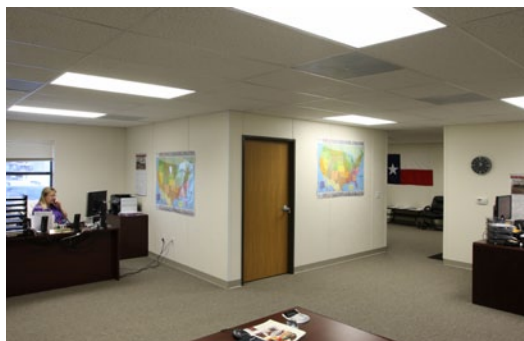

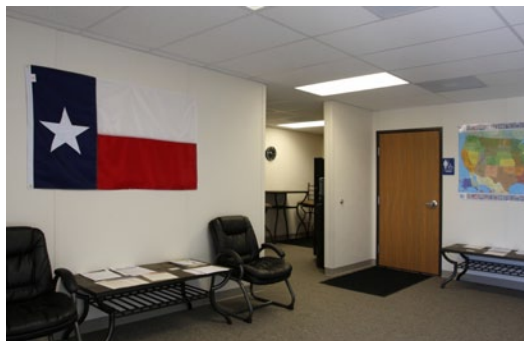

Private Offices

Dispatch Room

Waiting Area

Breakroom

Temporary  
Modular  
Construction

Working with a local developer, the Fikes Truck Line was looking to move from an older location to the fast growing suburb of Mansfield, Texas. After settling on a site that would accommodate an office and space for truck parking, Fikes chose a traditional modular building configured to meet the fast paced requirements of the trucking industry. Operating throughout the Midwest and Southern part of the US, Fikes specializes in hauling building materials, coil steel, structural steel, machinery and manufactured products, providing flatbed and heavy haul services to some of the largest shippers in the United States. Their 1,536 square foot building provides space for two private offices, a large dispatch and business office room, waiting area, and breakroom. The exterior is finished with a standard R-panel siding and the interior walls with vinyl covered gypsum.
