Residential reintegration facility

Description

Dallas Transitional Center

Completion

250 days including design

Accelerated Building System

This 31,752 square foot residential reintegration facility was built using Ramtech's Accelerated Building System prefabricated construction process for Lifestyle Management, a division of Corrections Corporation of America. The project, known as the Dallas Transitional Center was part of a ten acre development located on Dallas County owned land 12 miles south of Downtown Dallas. The building can accommodate up to 296 clients in four 50-man dorms, three 24-man dorms, and one 24-woman dorm. The steel clear span design allows for a large open seating and activity area, in addition to two large partitionable classrooms, a full commercial kitchen, multiple administrative offices and counselor rooms, a control room, and a nurses area. Ramtech was responsible for the full site development of the four acres that accommodate the building, 40 parking spaces, two basketball courts, and two covered pavilions.
