

Project Size

7,200 sq ft

Construction

IBC Type III-b

Facility Use

Urgent Care Clinic

Completion

90 Days

Description

Five exam rooms, four treatment rooms, triage area, large nurses station, two doctor's offices, x-ray, lab, and multiple storage areas

Slab-on-Grade
Permanent
Modular
Construction

Ramtech partnered with a project management firm and Houston-based Vaughn Construction to design and develop this urgent care clinic for St. Joseph Health System in College Station, Texas. Originally conceived as a traditional modular construction project, Ramtech lobbied the team members to use the Accelerated Building System to meet the projects schedule and design requirements. Measuring 7,200 square feet, the two-doctor facility features five exam rooms, four treatment rooms, triage area, large nurses station, two doctors offices, x-ray, lab, and multiple storage areas. The facility was critical in providing an entrance into a designated high-growth area by the hospital, and helped facilitate the future development of an entire medical complex in a previously undeveloped section of the city.
