Pool sales office

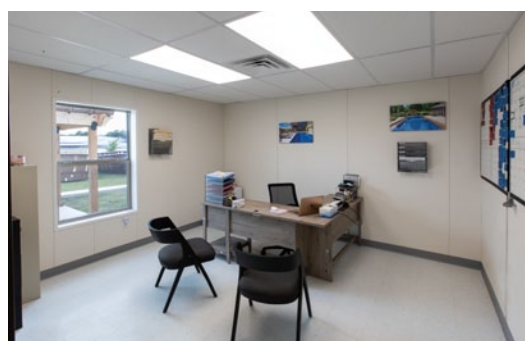

Description

Permanent modular building with 26-gauge steel finish and faux stone

Completion

60 days

Pier & Beam
Permanent
Modular
Construction

When Aquamarine pools wanted to expand their operations and add another retail location in the DFW Metroplex, they turned to Ramtech to construct a 1,680 s.f. permanent facility that would quickly accommodate their showroom and office space needs. The facility features four offices around the perimeter of the building, a central showroom with seated sales areas and adjacent breakroom, restrooms, and a large storage area. The exterior siding features a combination of 26-gauge high-rib steel R-Panel, with faux stone along with multiple decorative concrete and stone patterns used as a display for pool deck options at the main entry. The interior is finished with VCG on the walls and vinyl tile flooring. Heating and cooling are accommodated with two wall-mounted package units.
